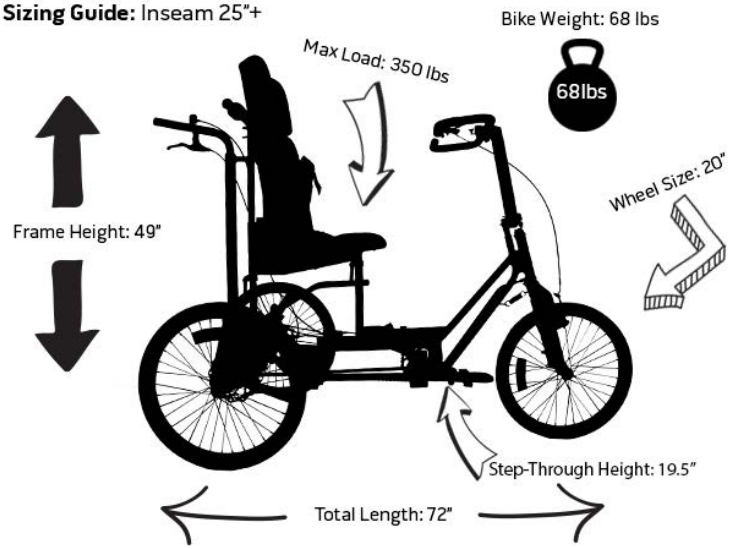
Sizing Guide: Inseam 25"+



Tips For Choosing an Adaptive Bike

1. Inseam Measurement

The measurement we use to ensure each rider gets the correct size of adaptive bicycle is called an inseam. To find an inseam, measure the distance between the bottom of the rider's heel to the top of the rider's inner thigh. Make sure the rider's inseam measurement matches the inseam range for the adaptive bicycle.

2. Know Your Accessories

We offer many different accessories to help people of all abilities experience freedom. Make sure to look through all of our available accessories to make sure the adaptive bike will work for the rider. More information on all of our accessories is available at: www.freedomconcepts.com/product-lines/adaptive-bikes/accessories/

3. We Do Custom

If none of our current models of adaptive bicycles work for you, we are able to custom build a bicycle that will. Please contact us at 1-800-661-9915 for more information.

Seating System

Please note that all seat bases come with a seat belt and all highback backrests come with a chest strap

Adult Seat	**16.75" width, 14" depth**
Adult Low Back	**17" width, 10" depth**
Adult High Back	**17" width, 18" depth**

The 2" raised pommel keeps riders further back in their seats while helping with stability and promotes leg abduction.

A narrow seat aids in clearance and in pass-through.

The standard seat will fit and function for most riders.
